

The figure displays a 10x10 grid where the columns represent the number of features (1 to 10) and the rows represent the number of clusters (1 to 10). The color of each cell indicates the number of clusters, with a color scale from dark red (1 cluster) to light yellow (10 clusters). The top row of the grid shows the number of features for each cluster, with values ranging from 1 to 10. The grid shows that for a given number of features, the number of clusters can vary, and the color of the cell indicates the specific number of clusters.
